Annual Soil Conservation District Report Issue

Lancaster Farming

VOL. 10 NO. 14

Lancaster Farming, Saturday, March 6, 1965

\$2 Per Year

THE VIEW OF CONSERVATION MOST APPRECIATED BY AIR TRAVELERS over Lancaster County is the familiar contour strips, as seen in this aerial shot of a farm in the New Holland area. Close examination of this picture should show a grass waterway near the lower left corner of the picture.

Ammon, Speaker At Poultry Assn. Here On Thurs.

The program for the Annual Educational Meeting of the Lancaster County Poultry Association will feature Richard Ammon, Executive Director of NEPPCO. He will discuss some of the changes and trends that he ahead for poultrymen in southeastern Pennsylvania.

Ammon is a native of Lancaster County, and served as Executive Secretary of the Pennsylvania Millers and Feed Dealers Association prior to joining NEPPCO. He is well known throughout the eastern United States, and is a respected leader in the industry.

The program will also feature Dr. L. Dwight Schwartz, Extension Poultry Veterinarian from Penn State University. He will discuss the latest findings and recommendations in the field of poultry disease.

The meeting will be held at the Poultry Center, 340 West Roseville Road, Lancaster, and will begin at 7:45 p.m., March 11. All are welcome.

Farm Calendar

Mar 8 — 7:30 p.m. Manheim Young Farmers at Central HS Subj "Livestock Marketing"

— 7:30 p.m. Ephrata Young Adult Farmers farm welding class "Vertical and Overhead welding"

— 7:30 p.m. Northeast 4-H Tractor Club at Allen Matz Equip Co., Denver

— 7:30 p.m. Reorganization meeting 4-H Ayrshire, Jersey (Continued on Page 9)

Weaver, Pres. Co. Baby Beef And Lamb Club

At a reorganization meeting this week the 120-member Red Rose Beef and Lamb Club named Larry Weaver, New Holland R1, as their new president. Weaver succeeds Eugene Hosler, Manheim R3.

Other officers elected for 1965 were vice-president, Kenneth Hess, secretary, Nancy Frey, assistant secretary, Linda Welk, treasurer, Robert Hosler; assistant treasurer, William Houser; song leaders, Judy Buckwalter and Tom Houser; game leaders, Carol Ann Hess and Dallas Wolgemuth; news reporters, Anna

Free-Stall Housing Sparks Interest At Annual Co. Dairy Day

Agricultural Research Engineer, Gordon C. Perry of Agway, Inc., described their experience to-date with the free-stall housing and liquid manure handling combination to approximately 400 countians at the Dairy Day meeting this week. There has been a gradually growing interest in this system of dairy cow management in the county, especially since the company milk inspectors have been pushing the conversion of loose-housing to free-stalls.

Perry showed slides of many working systems in the U.S. and abroad. One point he emphasized was that the farmer must be careful of what goes into his liquid manure system. Straw, for example, will clog the system. The ingredient that makes the whole thing work is water — lots and lots of water, Perry said.

Dr. James E. Honan, General Manager Inter-State Milk

F&H Canvassing About 60% Done In Co. This Week

Total results in the Farm and Home Foundation climbed to \$153,145 the past week, with the City Special Gifts and General Gifts Divisions now adding to the efforts of the Farm Gifts Division. This was announced, Wednesday, by Levi H. Brubaker and Lawrence H. Skromme, General Co-Chairmen of the \$375,000 capital funds appeal.

Of the over-all total produced, to-date, in the drive, \$121,531 has come from farm families and farm-related business interests of the county. The Farm Gifts Division has a quota of \$250,000 to raise, while the city units have been assigned a quota of \$125,000. About 60% of the canvassing in the county has been done.

Campaign officials reported that support in the county has included the gifts of numerous agricultural organizations. Recent gifts and pledges of support have come from the Lancaster County Holstein Association, \$1,000; Lancaster County Farm Cooperative Association, \$1,000; Lancaster County Fruit Growers Association, \$400; and the Lan-

(Continued on Page 4)

Weather Forecast

Temperatures for the five-day period, Saturday through Wednesday, are expected to average below normal with little day-to-day change. Normal high for the period is 47 degrees, and low is 28.

Precipitation is expected to occur as snow on Saturday, and as rain or snow again on Monday. Total accumulation should be approximately 1/4 inch, melted.

Soil Conservation Dist. Directors Report Program

The Lancaster County Soil and Water Conservation District carried on the following activities during 1964:

1 A total of 234 attended the Annual Meeting at the Blue Ball Fire Hall

2 The Outstanding Conservation Farmer was Forney Longenecker, Lititz R3

3 During May, Soil Stewardship was observed. Seven papers carried Stewardship articles and several rural churches used Soil Stewardship materials

4 A television program was

presented during Soil Stewardship Week.

5 A tour of county farms was held for the County Commissioners.

6 Director Chairman, Amos H. Funk is also serving on the State Soil Conservation Commission

7 The fifth Annual Plowing Contest and Field Day were held on the Roy Garber farm. There were 7 contestants, and approximately 175 people attended. Richard Groff, Lititz R3, was the winner.

(Continued on Page 6)

Tobacco Growers Can Gain 7-10 Days By Using Plastic Covers Over Seedbeds, Agronomist Says

One of the main new developments at the Penn State University Southeastern Field Research Laboratory is growing tobacco plants under plastic covers. Henry B. Engle, research agronomist at the station, told approximately 70 farmers at the Lincoln Independent School this week.

But the key to growing plants successfully with this method is ventilation, Engle said. Plants grown in this way will be ready to put out a week to 10 days earlier than those grown in a regular seedbed, trials at the Experiment Station have shown. They have found that the most durable framework for the plastic can be made from lattice, or lath.

In discussing weed control in the seedbed, Engle said there are two basic ways being used: steam and chemical. Steam equipment is gradually becoming obsolete, the researcher said, and chemical controls seem to be taking over. Methylbromide, a poisonous gas, gives excellent control over grass and broadleaf weeds, he said, but it is not effective against clover. Three other chemicals cited were: vapan, mylone (meco-fume), and cyanamid. They gave reasonably good control, but were not as effective as steam or methylbromide, even though these have to be applied with special equipment.

Fertilizer trials have not given results that were consistent enough to evaluate at the Station, Engle said. Tobacco seems to grow well under widely varying conditions, but given good growing conditions, it has been found that a fertilizer application of 100-150 pounds per acre will give the best results.

In commenting on the plant breeding aspects of tobacco, Engle reported that they are

trying to breed a variety with triple disease resistance. In Penn-Bel 69 they have a variety with double resistance — to wildfire and mosaic — and want to add resistance to black root rot in a new variety.

Sucker control was another area touched on at this meeting. Engle reported that many new chemicals are being tested in trying to overcome the industry's objections to some of the previous chemicals used. Several of the new ones look promising, Engle reported, but final approval from the cigar manufacturers is awaited. The most promising is a fatty-acid derivative that has worked well in Pennsylvania and in the flue-cured and burley areas. A year with normal moisture would be very helpful in evaluating these chemicals fully, the researcher said.

Engle concluded by saying that the grower should consider the use of supplemental heat shortly after the tobacco has been hung up to drive out that extra moisture before the damp, cold weather comes. This will go a long way toward preventing rot later on.

The other speaker on the program, Ben Mann, an independent buyer, and President of the Lancaster Leaf Board of Trade, confirmed that a well-ventilated, plastic-covered seedbed may gain that extra time that saves the grower from harvesting frost-tobacco. He also confirmed that long-season varieties, as Penn-Bel, should not be planted later than mid-June. Both speakers agreed that one serious management problem is that growers often top their plants too high. Sixteen good

Is THAT You, Mr. Jones?

Every day we receive phone calls and letters from stockmen asking for our advice. Tom Brown, for example, wants to know when the best time will be to sell his lambs, and Jim Smith has a load of hogs to consign. Will Wednesday be better than Monday? And then there is Charlie Jones. He has a good load of cattle, and he wants to know how the market will be next month.

We feel flattered, of course, that so many people contact us. But then again, there must be a good reason for all this. Maybe it's because we've been at this business for 67 years. Or maybe it's because we have specialists in every department — cows, bulls, stockers and feeders, fat steers and heifers, lambs, hogs, and calves — who have the ability, knowledge and experience to give you honest advice and information.

So, do what Mr. Brown and Mr. Smith and Mr. Jones do. Call or write us anytime. You will be glad you did.

"THE OLD DEPENDABLE" — SECOND TO NONE

Weekly Broiler Report

BROILER PLACEMENTS INCREASE 20 PERCENT

Placements of broiler chicks in the Keystone State during the week ending February 27, totaled 865,000, according to the Pennsylvania Crop Reporting Service. The placements increased 20 percent from the previous week but declined 5 percent from a year ago. Settings for broiler chicks totaling 1,268,000 decreased 1 percent from the previous week but increased 5 percent from last year. Inshipments of broiler type chicks during the past 10 weeks totaled 431,000 or 13 percent above the comparable period in 1963-64. Outshipments (2,249,000) were about 28 percent above the comparable period a year earlier.

Placements in the 22 major-producing states totaling 44,569,000 chicks increased 2 percent from the previous week and 5 percent from a year earlier. The 10-week total increased 6 percent from last year. Settings of 59,588,000 remained about the same as

the previous week but advanced 3 percent from a year ago. The 3-week total increased 3 percent from a year ago.

Eastern Pa. & N.J.

Demand for light type hens continues fair. Supplies adequate. Offerings of heavy type hens barely adequate. Demand spotty but fair overall. Limited quantities of 13-14# heavy type hens turkeys sold off farms at 32¢. Prices paid at farms. Light type hens 57¢ mostly 66½¢; heavy type hens 19-21¢ mostly 19¢.

Fogelsville

(Prices for dock weights, cents per lb except where noted)

Hens, light type 6-8, 6; Hens, heavy type 15-28, 20-28; Pullets 19-30½, 28-30½; Roasters 17-38, 28-34; Capons 34-36; Ducks 27½-33, 31-33; Drakes 32-42, 38-42; Geese 22-34, 30-34; Turkeys, toms 20-25½, 25; Turkeys, hens 34½-39, Rabbits 36-57, 46-50; Guineas 43-52½; Pigeons (per pair) 70-80, 80, Jumbo Squab 87½; Total coops sold 745

Delmarva

The Delmarva broiler and fryer live prices advanced nearly ¼ cent. Demand was good for moderate auction offerings.

Estimated slaughter for Friday and Saturday, 720,000 head compared to 607,100 head last weekend.

Prices paid and reported purchases for the 24 hour period ending 10:30 a.m. Friday broilers and fryers, 16-9-18-5, 1,025,500 head, including 453,200 head offered and sold at Eastern Poultry Growers Exchange Thursday.

Twenty-six percent of the broilers and fryers sold for 17-5-17-7.

The Delmarva broiler feed ratio for the week ending 2/28/65 was 3.3, up 3 points from last week. Mash prices averaged \$103.06, and broilers averaged 17 cents per pound.

(Lancaster County Soil Conservation District)

Legislators Represent PEOPLE!

In justifying the Supreme Court's "one-man, one-vote" edict, Chief Justice Earl Warren wrote: "... Legislators represent people, not trees or acres . . .".

And that is the whole point, Mr. Chief Justice, the people would like to continue to be represented by legislators, not by city power machines!

It is true that many of the states themselves brought about this momentous decision because they ignored normal reapportionment in their state legislatures. As populations shifted and cities grew, 1 vote in country districts often was equal to several hundred city votes. Thus small population areas were able to dictate state policies in many cases. This is wrong, but why try to correct a wrong by tilting the country 180 degrees in the other direction?

And that is essentially what the Court's decision will do. In its hasty effort to assure all the people of fair representation, the Court is in effect really assuring that many people will not be represented because they will have no legislator speaking for them or interested in their problems. In the words of Justice Harlan: "Legislators can represent their electors only by speaking for their interests — economic, social, political — many of which do reflect where the electors live." Farmers in Lancaster County, for example, are not

going to be very well represented by legislators from Pittsburgh or Philadelphia — their interests are different and the pressure from their immediate districts would take precedent.

It would appear that the Court has not only over-stepped its area of authority in issuing the order making it mandatory for all states to reapportion their state legislatures on a population only basis. It also has set up a situation that can be countermanded only by the American people — through their Congressmen. Circumstances demand a Constitutional amendment that would guarantee that one house of each state legislature can reflect factors other than population.

There is a lot of momentum building up for such an amendment, but it will require massive support by voters throughout the country. If you would preserve our representative form of government contact your representatives now on both the state and federal level, and let them know how you feel. Oklahoma Senator, Mike Monroney summed up the situation very well when he said, "... Good local self-government cannot be imposed from above. It must be generated by the people themselves."

After all, that's what democracy is really all about, isn't it?

Why We Work

Lesson for March 7, 1965

Background Scripture: Matthew 19 and 20.
Devotional Reading: Matthew 20:20-28.

SOME of the parables of Jesus sound crazy. Let's face it: the "plain and simple" teachings of Jesus are often neither clear nor simple. Reader and listener have to wrestle as best they can to find what Jesus really meant.

One thing the Christian reader is sure of: These parables are not crazy. The Lord meant something true in each one.

One story is particularly strange. It is about a grape-grower at harvest time who hired workmen in the morning for a denarius a day. (An average daily wage in New Testament times. The "denarius" was a small silver coin.) At intervals through the day he hired more men, telling them he would pay what was right. Finally an hour before quitting time he hired some more without promising them anything at all. Then, at the end of the long twelve-hour day, he paid off, giving each man the same amount, whether he had worked one hour or twelve.

Working for the paycheck

This parable is not intended to teach us what a day's wages should be in our day and time. It is not intended to tell employers what kind of wage scale is the right one. (What would become of a farmer who regularly hired workmen as the man in the parable did?) The point is in the different motives men have for working at all. The point is indeed a kind of double one. It makes us think of the different motives men have for working.

Now some people work for God with purpose. They keep

his commandments, they do kind deeds, they help worthy causes, only because they hope there is a book-keeping angel who will see to it that they get credit for every good thing they do. Now it is not wrong to work for a paycheck, even God's. What is wrong is having this as one's only and sufficient reason for working at all.

Easy money

On the bottom rung of the stairway to heaven, below those who work only for pay (here or in heaven) stand those who hope the stairway is an escalator that will take them to the top floor without their having to climb. In terms of reward, these are the people who live for easy money. They are the rice-Christians. They are the ones who, not content with getting credit for every single good deed they do, want credit for what they don't do.

Working in faith

The last men hired that day had no promises at all. No denarius, not even "what is right." The only motive they could have had was confidence in the man who hired them. They trusted him, and when he ordered them into the vineyard, they went, not expecting much. Now the point of the story (as we said) is a double one. Here Jesus is telling us that what a man is worth cannot be measured entirely by his visible accomplishments. Motive is a very important part of any action. If human beings could see clear into the hearts of men, as God can, they might arrange their payrolls differently. But in real life there is no computer yet made which will calculate what percentage of credit for a good deed is due to motive. No man can guess it precisely. But there is a final Judge, supreme and infallible. It is God who sees the heart. All that our neighbors guess at but never see is clear to God. Only God pays off in the end. And before his judgment throne the greatest rewards may come to those who expect them least.

(Based on outlines copyrighted by the Division of Christian Education, National Council of the Churches of Christ in the U. S. A. Released by Community Press Service.)

Now Is The Time . . .

To Get Quality Seeds

Spring planting time will soon be here when the seasons crops will be started. The use of certified seed is always insurance against poor yields and the spread of weeds. Research work has shown that many farmers plant weed seeds with home-grown oats and other grains. We urge local farmers to be sure they are not planting weeds when they use un-certified, unknown seeds.

To Inspect Pastures

Pasture areas along public roads should be thoroughly inspected before the herd or flock is turned out on pasture. Many folks are careless about throwing away bottles and empty containers that may contain poisons for livestock. We urge all livestock producers to clean up their pastures before the grazing season.

To Request Government Aid

Local farmers who are planning to ask for conservation practice assistance should keep in mind that the formal request should be made with the local ASC office and approved by the County Committee before the practice is started. For lime and fertilizer payments, a complete soil test through Penn State University is required.

To Inspect New Alfalfa Fields

Local farmers are urged to give close attention to the con-

MAX SMITH

dition of new alfalfa stands. The dry weather of last fall prevented good growth before freezing weather. The open winter and frequent freezes may have caused considerable heaving of the small alfalfa plants. With poor stands it may be best to reseed the field with a straight alfalfa seeding in late March or early April. The ground should be disced and prepared as for a new seeding and the band-seeding method used. Without any nurse crop the area should be sprayed for weed control. These early spring seedings without any nurse crop have been giving very good results in recent years.

DEKALB[®] CORN and EASTERN FARMERS *Get along Mighty Well Together!*

Official DeKalb "Measured Acreage" Yields Show **REAL YIELD BREAKTHRU**

● The one BIG factor in making money from corn growing is YIELDS. That's why More Farmers Plant DeKalb Than Any Other Brand—and have for many years. DeKalb's "Measured Acreage" program provides an exacting method of measuring the actual "on-the-farm" performance of DeKalb Hybrids. Yields listed were harvested by normal mechanical means **WITHOUT GLEANING** and

authenticated by reliable, unbiased witnesses. Corn was weighed and tested for moisture and yields accurately calculated to a per-acre yield of No. 2 Corn. Real proof that it Pays to Raise DeKalb. Picture above is on the Lippy Brothers farm, R.1, Hampstead, Md. Their "measured acreage" yield was a fine 147.45 bushels per acre of DeKalb Corn. Plant ALL of your 1965 corn acreage with DEKALB.

Sterling J. Leister (above) of Hampstead, Md., made a fine yield of 130.40 bushels per acre, made with DeKalb 805. "It yields well, stands well and picks good," he says.

Amos Shipman of Jersey Shore, Pa., likes DeKalb Corn—and why not? His "measured acreage" yield was an excellent 163.68 bushels per acre.

ACCURATE "ON THE FARM" YIELDS FROM "MEASURED ACREAGE"

NAME	ADDRESS	COUNTY	"MEASURED" YIELD PER ACRE
Cyril Johnson	Montgomery, Pa.	Lycoming	169.80 bu.
Russel Rozenberg	Jersey Shore, Pa.	Lycoming	153.62 bu.
Robert Chaapel	Milton, Pa.	Montour	122.99 bu.
Frank Lentz	Jersey Shore, Pa.	Lycoming	142.40 bu.
Sones Enterprise, Inc.	Muncy, Pa.	Lycoming	137.97 bu.
Stephen Lakotos	Nazareth, Pa.	Northampton	133.85 bu.
Daniel Stoltzfus	Parkesburg, Pa.	Chester	128.71 bu.
Alvin Houck	Tyrone, Pa.	Huntingdon	105.42 bu.
Herman Espy	Spruce Creek, Pa.	Huntingdon	125.25 bu.
Fred Eberspacher, Jr.	Vienna, Md.	Dorchester	183.14 bu.
William Eberspacher	Cambridge, Md.	Dorchester	161.05 bu.
Hastings Bros.	Berlin, Md.	Worcester	141.15 bu.
Emerson Eberspacher	Cambridge, Md.	Dorchester	151.78 bu.

DIVERSION TERRACES, like the one shown under construction on a farm in the Pequea area, are becoming a major conservation tool with the aid of the heavy earth moving equipment now available.

FHA Reports On Farmer Loans

Farmers Home Administration services to farmers and rural people during 1964 reached the highest loan volume in local history. A total of \$624,000 was loaned by the local office located at Lancaster. Purposes for which loan funds were used included:

Operating loans — to reorganize farm business with essential equipment, better livestock and operating expenses to both full time and part time farmers.

Farm Ownership loans — to buy, develop, enlarge farms, to refinance and consolidate debts and develop recreation enterprise.

Rural Housing loans — to families in rural areas and small towns, as well as farmers, for the construction of

decent, safe and sanitary housing and farm service buildings.

Emergency loans — to assist farmers hard hit by drought to maintain their normal farming operations.

Included in the above loans to farmers were funds for the adoption of important soil and water conservation measures which are a must for the development and efficient management of land and water resources, crucial in the successful operation of farms. Over 75% of farm ownership borrowers are district cooperators.

Soil and water association loans are also available to watershed organizations to carry out plans to protect, develop and utilize the land and water resources in small watersheds and also loans to install water supply systems for farmers as well as rural communities.

Soil Conservation

(Continued from Page 1)

ner of the County contest for the second year and retained possession of the Plowman Trophy for 1964.

8. Richard Groff was sponsored by the District in the State Plowing Contests, in which he placed fourth.

9. Four Watershed meetings were held during the fall.

10. The Districts helped sponsor a 4-H Conservation Club through the Extension Service and Associate Directors.

11. A District representative attended meetings of the Lancaster Co. Agriculture Council.

12. The District continued to help sponsor the Silt Sampling Station on the Conestoga.

13. The District aided in the Susquehanna River Basin Study.

14. As a result of the Susquehanna River Basin Study, the District and cooperating Agencies met with some Borough Officials to discuss possibilities of flood control in their area.

15. The District Cooperating Agencies helped put on six Conservation television programs.

16. Use of the film "Beyond Tomorrow," purchased by the District two years ago, is being used in schools, Young Farmer Programs, service clubs, etc.

17. An Associate Director's meeting was held. Farmer Cooperators now total 2,234.

18. There were 72 new Cooperators signed during 1964 with acreage totaling 5774.7 acres.

19. Held 12 regular monthly meetings. Farmer Directors Attendance again was 87.5%.

20. The District, in cooperation with Berks County Soil and Water Conservation District, erected a road sign between the Counties.

21. The Directors purchased a set of Conservation Slides for the 4-H Club work.

22. The District helped sponsor the Land Use and Management Contest for Vocational Agriculture Students.

SCS Reports On Year's Services

The Lancaster County Soil Conservation Work Unit of the USDA Soil Conservation Service completed the following work during the 1964 calendar year, according to Wayne Maresch, county conservationist:

A new credit program has been established through the Economic Opportunity Act of 1964 for low income families living in rural areas. Loans are available to both farmers and other rural residents with incomes that are too low to cover basic needs and that have a reasonable prospect of increasing their earnings through a small amount of credit plus aid in management.

The Farmers Home Administration was very happy to take part in a county wide tour this past year that illustrated soil and water conservation practices on farms. We would like to thank the local Soil Conservation District Directors for their assistance to borrower families. The Farmers Home Administration Office, serving Lancaster, Lebanon and Chester Counties is located in the Post Office Building, Lancaster, Pa.

Richard W. Hoover
County Supervisor

A GRASS WATERWAY, fed by a series of terraces, on a farm in the southwestern part of the county looked like this after experiencing a 6-inch rain in 10 hours. This illustrates the great carrying capacity of these waterways. This waterway is regularly cut for hay.

EROSION caused by a 6-inch rain on a tobacco field on a farm in the New Danville area without the benefit of such conservation practices as diversion terraces or grass waterways.

Lists Activities

The following is an accomplishment report by the Game Commission showing work completed in Lancaster County during the past year. On the four (4) Farm Game Projects we have a total of 26,331 acres.

Farmers contacted — 383.
Coniferous distributed — 2450.
Wildlife Borders cut — 2200 lin. ft.
Refuges Maintained — 15.
Safety Zones Established — 323.

There are four (4) tracts of State Game Lands in Lancaster County comprising a total of 3932 acres.

Cover crops seeded on strips — 30 acres.
Strips mowed — 15 acres.
Woodland border cut — 2200 lin. ft.
Trees released — 105.
Roads maintained to food plots — 24 miles.
Shrubs and vines released — 30.
Forest thinnings & cuttings — 3.5.

W. E. Woodring, District Game Protectors

Dist. Forester's Annual Report

W. P. Moll, District Forester of the Valley Forge Forest District with offices in the Valley Forge State Park, and John H. Kitch, Service Forester of the Conestoga Project at Reinhold, R1. Pa. report that private forest accomplishments have continued even though the fire protection work required much of the time during the spring and fall of 1964.

During the 1964 fire seasons, Lancaster County had 14 forest fires extinguished with only 28 acres of the county being charred. This report gives us a chance to thank all in the County who helped make this good record.

The assistance in marking of timber land for sale leads the list in accomplishment in the county. There were 482 thousand board feet of timber marked with the largest job being the Strasburg watershed with 218,000 bd. ft.

The other assistance given to private persons during the year covers many fields as follows: Agriculture Conservation Program Approval of Work done (8); Woodland Examinations to advise farmers on care of woodlots (5); Planting Plans (5); Tree Diseases (2); Fire Protection (1); Timber Stand Improvement (2) and Education and Information (6). This assistance was given free of charge because of a program between the Federal and State Government namely the Cooperative Forest Management Program.

The tree distribution point at the Lancaster County Highway Garage, on Lincoln Highway last year distributed 46,000 trees to the land owners of Lancaster County. A new species is Hybrid-Poplar,

which can be bought from the Department of Forests and Waters.

The Department of Forests and Waters started a new program in 1964 to protect our woodlands from insects and disease. The area will be surveyed from an airplane and if trouble is detected, follow up ground studies will be made. The Canker-Worm damage in the southeastern part of the county was the only large area appearing during 1964.

Highway Dept. Cooperates SCD

The Pennsylvania Department of Highways cooperated with the Lancaster County Soil Conservation District in the following conservation practices:

Contract Seeding & Mulching
A total of 76,187 square yards of seeding and mulching (157 acres) cut and fill slopes was done by contract along 5.45 miles of new road construction. The routes involved were L.R. 36008-4, L.R. 36065-4, L.R. 137-8, L.R. 792-1, and L.R. 36053.

Revitalization
The grass on cut and fill slopes as well as on median and interchange islands was revitalized along TR 23, T.R. 340 US 30, TR 772, L.R. highway were treated. Material a total of 79 miles of also used included 6 tons of 8-16-16 fertilizer, 400 lbs of grass seed and 120 lbs. of crown vetch seed. In addition there were 176 trees watered and revitalized using sub-irrigation equipment applying an average of 24 gallons of water and 2 pounds of 8-16-16 fertilizer per tree.

Chemical Spraying
A total of 414 gallons of

4-H Club News

● Highway Dept.

(Continued from Page 7)
Herbicide (2,4-D and 2,4,5-T) and 377 pounds of soil sterilant was applied along 456 miles of State Highways. Vegetation sprayed with a 1000 gallon rig included brush, poison ivy and noxious weeds. The herbicide was applied at the rate of one gallon to 100 gallons of water and the soil sterilant was applied at the rate of 10 pounds to 100 gallons of water.

Roadside Planting

A total of 12 Deciduous Trees and 10,000 crown vetch crowns were planted along L. R. 792-1 (U.S. 30 By-pass)

A grand total of 2,851,000 lineal feet of Roadside Treatment of all types was accomplished during 1964 in Lancaster County. It is anticipated that this amount will increase to about 2,900,000 lineal feet in 1965.

H. P. Kaufman
Roadside Engineer
District 8-0

● Tobacco Growers

(Continued from Page 1)
leaves will generally make a grower more money than 20 or so fair ones Mann listed several reasons why growers should avoid high topping: 1) they handle less leaves; 2) stalks hang better and freer when not too long; 3) the top leaves are generally immature and subject to freezing in the shed; 4) if growing weather stays dry, the top leaves won't finish out.

Another word of caution put forward by Mann, when the tobacco plants are cut early the grower shouldn't be in a hurry to pack them tightly in his shed. Leave a flue open for ventilation, Mann said, by putting about three flues somewhere else for a few days before filling shed.

In commenting on MH-30, "it does the job," Mann said No tobacco men like it be-

cause it is detrimental to quality, but it saves the farmer a lot of work. If buyers will pay an extra two cents for hand-suckered tobacco, then the growers can afford not to use a chemical sucker control; otherwise they can not. There has been no serious problem from this chemical during the past three dry summers, Mann said, but if we get a real wet year it could cause trouble — espe-

New from Hoffman . . . HAYMOR Alfalfa

MORE HAY

Haymor means just what its name says . . . you get more hay. In 20 different comparison trials in northern states, Haymor outyielded Vernal by an average of 4%—and in at least one case outproduced Vernal by 22%. In six of these trials where Ranger was also grown, Haymor averaged 12% more hay than Ranger. Haymor means more hay and more profit for you.

RESISTS DISEASE

Haymor has resistance to bacterial wilt disease and has good tolerance to common leaf spot diseases. This disease resistance is another big reason why you will want to put Haymor in your fields.

LASTS LONGER

Haymor is an unusually vigorous variety that performs well under all types of soil where alfalfa is grown. Because of good disease resistance and hardiness, it lasts longer and provides better hay and pasturage.

MATURES EARLIER

Haymor — similar to Du Puits — matures earlier than most other alfalfas. In fact, Haymor is only about two days later than Du Puits — 3 to 4 days earlier than most U.S. alfalfa types.

FAST STARTS

Haymor is noted for its excellent seedling vigor. It establishes fast to make a thick, healthy stand. Its extra vigor makes it easier to establish under more competitive conditions.

WINTER HARDINESS

Haymor has good winter hardiness . . . in the same class as Ranger. This feature, plus its good spring vigor, makes it ideal for normal rotations and general hay and pasture uses.

HOLDS LEAVES LONGER

Haymor holds its leaves extremely well. This ability to hold on to its protein-packed leaves means it makes top quality hay or silage.

MIXES WELL

Haymor is a top producer whether it's planted alone or in combination with other legumes and grasses. Its disease-resistant features make it ideal for use in hay and pasture mixtures.

They are as follows: president, Earl Wenger; vice-president, David DeLong; secretary, Ann Lefever; assistant secretary, Linda Sue Kreider; treasurer, Elaine Kreider; reporter, Charles H. Craig III; game leaders, Gary Craig and Joyce Huber; song leaders, Marilyn Krantz, Gail Griffith and Linda Lou Kreider; County Council, Earl Wenger; junior leaders, Charles H. Craig III and Robert Wenger.

● Dairy Day

(Continued from Page 1)

Producers' Cooperative, defended the Pennsylvania Milk Control Commission and the state milk laws in discussing the milk marketing situation. He felt that no drastic changes should be made in either the Commission or the law.

Representing the Penn State Extension Service, Joe S. Taylor, Chairman Dairy Science Extension Section and Stephen B. Spencer, Dairy Specialist, tackled a broad area of dairy problems ranging from pesticide residues to dairy herd management ideas.

Spencer stressed the difficulty of removing residues from forage, and urged dairy-men to follow the recommendations of their county agent on the type of pesticides to use, and to follow to the letter the manufacturers' directions for handling, rate of application and calibration. "It may take as long as 8 weeks for pesticide residues to be completely removed from a cow's system," Spencer said.

The dairy specialist also observed that the cost of testing a forage sample for residue is between \$15-\$20, and

TWO OF THE COUNTY DAIRY DAY SPEAKERS ARE SHOWN WITH Victor Plastow, associate county agent in charge of the program. Left to right, Stephen B. Spencer, Penn State Dairy Specialist; Plastow; Joe S. Taylor, Chairman, Dairy Science Extension Section. Other speakers not shown were: Gordon C. Perry, Agr. Res. Engineer with Agway, Inc.; Dr. James E. Honan, General Manager, Inter-State Milk Producers Cooperative. About 400 persons attended the meeting held at the Guernsey Barn.

L. F. Photo

that there are only six laboratories in the state set up for this type of testing. It is far cheaper and wiser to avoid

pesticide contamination than it is to try to correct the problem once it exists, Spencer concluded.

FULTON GRANGE MEETS March 4, 11 and 18 at the Grange Hall for boys interested in joining the Boy Scouts and their parents. Also conducted the business any other interested citizens meeting. It was announced that there will be meetings Four members of Fulton

Grange attended a meeting February 19 in Governor Scranton's reception room in the State Capitol when future plans for Lancaster Co. highways were announced. Mrs. Jesse Wood, Lecturer, presented a patriotic program. Group singing of patriotic songs; reading, "What Should Have Happened," by Mrs. Clifford Holloway Jr.; talk, and jokes. The next meeting will be held March 8 and new members will be initiated. Worry is interest paid on trouble before it comes due.

Below is the story you saw in Progressive Farmer describing the revolutionary fertilizer, Super Q.

Super Q Corn Starter is made exclusively by Miller Chemical & Fertilizer Corp.

A renowned farm editor reports on a new fertilizer, with a new twist—only one farmer in five can buy it! Read how these top growers are boosting profits by 25%.

The big breakthrough in fertilizer

BY JOHN STROHM

I'd like to tell you of the most exciting fertilizer idea I've run across in 30 years of farm reporting.

It's an idea that's helping top farmers break through their personal yield barriers to such yields as 130-bushel corn... 5-ton hay... 2-bale cotton... 45-bushel soybeans... 3000-lb. tobacco.

The idea is Super Q®, a fertilizer so exclusive you can't even buy it unless...

But I'm getting ahead of my story:

Two years ago a select group of local manufacturers were stung into action by a disturbing truth. The top farmers were moving faster than their advisers... demanding that fertilizer companies improve their scattergun approach to fertility problems.

So, these hometown manufacturers pooled their strength in a giant cooperative effort. They called in the best scientific brains in America, and handed them this "impossible" assignment:

1. Develop the best fertilizer it is humanly possible to make.
2. Forget about price-per-ton. But be dead sure this fertilizer will return the farmer more net profit than any other product on the market. We want to *guarantee* it will, not just talk about it.
3. Formulate it for the top farmers in each community. We'll refuse to sell it to anyone *but* the top!
4. Rifle it to fit a specific area... yes, even a *specific moisture level*.
5. Make a different fertilizer for corn, for cotton, for barley, tobacco, wheat, soybeans.
6. Use the best form of nutrients *for the crop*—not the cheapest or easiest for the manufacturer.

Wow! Some of those who were called in declared: "You just can't get all those coons up one tree!"

But other scientists rose to the challenge. They tested soil and moisture on top farms in each community... pored over the latest research... analyzed new manufacturing

techniques, new materials. They picked the brains of ag college specialists, interviewed top farmers on their personal goals.

And then they created Super Q.

The Super Q program is a national effort. It has all the efficiency and breadth of bigness... but with the pinpoint local accuracy to give the individual grower higher yields and profits. In side-by-side tests on hundreds of farms with six different crops, Super Q outyielded the best commercial fertilizers by as much as 25%.

Successful as they have been with Super Q, the scientists do not see their job as done. As Dr. Ray Starostka, chief formulator for Super Q, explained to me, "Don't memorize the numbers on a Super Q bag; they'll change the minute we get a new test or technique—or as local conditions demand."

I certainly don't want to give the impression that Super Q is a cure-all. On the contrary, it will *only* be sold to top farmers—the top 20% in yields and management. They'll *make* Super Q pay off.

I surveyed 900 farmers in ten states, and it was really exciting to hear them talk of their goals. Quite a few told me they were shooting for 200-bushel corn... 7-ton hay... 600-bushel potatoes... 60-bushel soybeans... 3500-lb. tobacco... 70-bushel wheat... 100-bushel barley... 2½-bale cotton... 25-ton sugar beets... 30-ton silage... 135-bushel oats.

The **Super Q Manufacturers** are a select group, **jealous** of their **reputation**. Among other things, they must agree to disciplinary action should they fall below the rigid standards. They must pledge to provide soil and crop and management services that will help Super Q farmers make more profit.

Next Month, Report No. 2.

Top Farmers Forced Us to Develop Super Q"

SECOND SECTION

Signup For Feed Grain

A total of 223,821 farms have been signed to participate in the 1965 Feed Grain Program during the first four days of the Feb. 8 - March 26 signup period, the U.S. Department of Agriculture announced recently.

Producers signed up have agreed to divert 5,374,800 acres from the production of corn, grain sorghum and barley during the current crop year. The diversion is from base acreages (1959-60 average plantings) of 10,506,100 acres of farms, or 51 percent of the base on the signed farms.

The 1965 signup shows 3,989,800 acres of corn are to be diverted from 7,350,100 acres of corn base established for these farms, or an average diversion of 54 percent of the bases. For grain sorghum, 1,046,900 acres are to be diverted from the 2,258,600 base acres or an average diversion of 46 percent. For barley, excluding malting barley farms, the agreed diversion is 337,400 acres from a total base of 896,900 acres on signed farms.

Royer Holstein Gold Medal Dam

Recognition as a Gold Medal Dam has been reported for Parkchester Hillmac Beauty (86), a Registered Holstein cow owned by Herbert and Rhelda E. Royer of Lancaster, Pa. The achievement comes for outstanding milk and butterfat production, pleasing

(Continued on Page 15)

or an average diversion of 38 percent.

The 1965 Feed Grain Program in general is similar to that for 1964. Producers can participate by diverting at least 20 percent of their feed grain base acreage and devoting it to conserving use (or can plant specified non-surplus crops upon request with 0 to 50 percent diversion payments). In return, they become eligible for price-support loans plus payments based on normal production of the acreage planted for harvest, and acreage diversion payments. This year, for

FHA Announces A New Small Loan Program

A new program of small loans coupled with farm management assistance is now open to farm families with limited incomes in Lancaster County, according to Richard W. Hoover, county supervisor for the Farmers Home Administration.

Hoover said farmers in Lancaster County can participate in the program to develop higher returns from their farming operations.

Loans up to \$2,500 are available to farm families with limited incomes who cannot qualify for financial assistance under regular loan programs of Farmers Home Administration or private lenders.

Opportunity loans are aimed at helping farm and rural families earn more income through their own enterprises, Hoover said.

Loans to farmers operating small, limited income farms may be used to purchase live-

(Continued on Page 16)

Competition In City Milk Markets Shows Sharp Drop

The number of dealers serving city milk markets is declining rapidly, according to a report published recently by the U.S. Department of Agriculture.

The report by USDA's Economic Research Service examines competition among fluid milk dealers in 71 Federal order milk markets. It is part of a continuing program of research on changes in marketing of farm products and their impact on marketing firms, consumers, and producers.

Between 1950 and 1962, the

number of milk dealers declined by one-half. Most dealers going out of business were small firms with only a few routes. The decrease was greatest in the smaller milk markets, says the report.

While the number of dealers fell in nearly all markets from 1950 to 1962, concentration of milk sales changed more radically in small markets than in large ones. Concentration — the share of sales of the four largest dealers in a market — rose sharply in smaller markets. Since

Chill until jelly-like consistency. Fold in tuna, celery and pimiento. Pour into mold on top of cucumber layer. Chill until firm. Unmold onto salad greens. 6 to 8 servings.

BAKED FISH AND TUNA ROLLS

- 6 tablespoons butter or margarine
- 6 tablespoons flour
- ½ teaspoon salt
- ¼ teaspoon paprika
- 2 cups milk
- ¼ cup chopped green onion
- 2 tablespoons chopped parsley
- 1 teaspoon grated lemon peel
- 3 tablespoons fresh lemon juice
- 2 pounds sole filets
- 1 can (7-oz.) tuna, drained
- 1 cup shredded Cheddar cheese

Melt butter in saucepan over low heat; add flour, salt and paprika, blending well. Add milk slowly, cook until thickened, 4 to 5 minutes, stirring continually. Stir in onion, parsley, grated lemon peel and lemon juice a little at a time, blending well. Remove from heat.

Place filets on flat surface. Salt and pepper filets on both sides. Spoon a little drained tuna onto end of each fillet, roll up fillet snugly with tuna in center. Fasten with wood-

en picks. Place fish rolls in greased shallow baking dish. Pour sauce over fish rolls; sprinkle with grated cheese. Bake, uncovered, at 375 degrees, 25 to 35 minutes. Serve at once 6 to 8 servings.

ORANGE-TUNA MACARONI SALAD

- 2 oranges, peeled, cut into bite-size pieces
- 1 can (7-oz.) tuna, drained and flaked
- 2 cups cooked macaroni, drained, cooled
- ½ cup diced celery
- ¼ cup finely chopped onion
- ½ cup mayonnaise
- 1 teaspoon prepared mustard
- ¼ teaspoon salt
- Coarsely ground black pepper

Combine orange pieces, flaked tuna, macaroni, celery and onion. Blend mustard, mayonnaise, and salt; stir through salad ingredients. Add black pepper to taste. Salad will keep for several days when covered and refrigerated. 6 to 8 servings.

BROILED TUNA SANDWICHES

- 1 recipe waffles
- 2 cans (7-oz.) tuna, drained and flaked
- ¼ cup sliced stuffed green olives
- ¼ cup sweet pickle relish
- 1 tablespoon minced onion
- 2 teaspoons lemon juice
- Dash black pepper
- ¾ cup mayonnaise

For the Farm Wife and Family

Ladies, Have You Heard? . . .

By: Doris Thomas, Extension Home Economist

Suggestions For Cleaner, Brighter Clothes
If you're not satisfied with the way your family's clothes look after laundering, you may want to try something different. Here are a few ideas.

Soil clothes more carefully, especially light from dark colors.

Use a short prewash soak with detergent. Check the temperature of the water in the washer. Make sure it is the right temperature for the load in the machine. You may need to increase the washing time.

Include a water conditioner in the wash water and the first rinse, and add another rinse if you think it's needed.

Soil clothes more carefully for tumble drying.

Worth Trying Anytime

To check the abrasiveness of a cleanser you use for bathroom fixtures, put a small amount of the cleanser between two pieces of glass, then rub them together. If the glass is scratched, the cleanser is too harsh to use on bathroom fixtures or on other porcelain or enamel pieces.

Blend instant minced onion with softened butter and prepared mustard. Spread mixture on bread and top with boiled ham and Swiss cheese. Put into a hot oven just long enough to melt the cheese. Makes tasty open-faced sandwiches.

For breakfast, a quick lunch, or supper, serve hot ham toast with poached eggs. Spread toast with deviled ham, then put in the oven at 350 degrees while you poach the eggs. Top each slice of hot ham toast with a poached egg and serve at once.

Add toasted slivered almonds to chicken gravy just before serving. The nuts give a distinctive flavor and texture to the gravy.

To get just a few drops or even a teaspoon of lemon juice, you don't have to cut a lemon. Simply warm the lemon to room temperature and jab a fork into it. Then you can squeeze out as much juice as you need and store the lemon, without drying out, until you need it again.

RED COMB CHICK STARTER Helps Build Your Profits

Right from the start . . . fast, safe chick growth!

That's what you want with the chicks you buy; that's what you get when you start chicks off with Red Comb Chick Starter. Add a bit of Red Comb "C" Flakes the first day. It's flaked grains, mostly . . . plus a touch of molasses. It helps get your chicks to eating. Then, for seven weeks feed Red Comb Chick Starter. It has everything . . . everything chicks need for good health, fast growth and rapid feathering. Red Comb Research has expertly balanced 22 different ingredients in Red Comb Chick Starter. Your chicks have the advantages gained through a half-century of Red Comb Research. They live, grow and hustle. There is no better start for your replacement flock.

**GOOD'S FEED
MILLS**

New Providence and Leola

● FHA

(Continued on Page 13)
stock, machinery and equipment, construct or repair farm buildings, pay annual operating expenses for seed, feed and fertilizer, refinance real estate debts and purchase land.

Loans are repayable over periods of up to 15 years. They carry an interest rate of 4½ per cent.

To qualify for loans to finance agricultural enterprises an applicant must be a farmer and have earnings that are too low to cover basic family living needs. In addition, he must be unable to obtain credit through other sources, including regular loan programs of the Farmers Home Administration.

Additional information on loan programs under the Economic Opportunity Act is available at the Farmers Home Administration office in the Post Office Building, Prince and Chestnut Streets.

● Competition

(Continued from Page 13)
small markets often have only six to eight dealers, the loss of one firm is likely to increase the sales of the largest firms.

In larger markets, despite the drop in number of dealers, concentration decreased slightly. No apparent relationship exists between declining number of handlers and changes in concentration of sales in large markets, the report states.

Regional and local multi-unit firms grew faster than national and local single-unit firms between 1950 and 1962. National firms have grown by acquiring other firms already in the market. National firms which did not acquire other firms grew hardly at all. The

country's three largest dairy companies increased their share of the national market slowly from 1950, after declining during the previous 15 years, the report notes.

● Signup

(Continued on Page 13)

the first time, eligible feed grain and wheat cropland acreage can be substituted provided producers sign up and participate in the two programs.

It is not necessary for farmers to indicate at signup whether they plan to participate in the substitution provision, since its extent will not be determined until compliance is checked prior to harvest. Interested producers should discuss details with their county ASCS office since the use of substitution provisions can materially affect the levels of payment.

NOW 2 BRANDS CARRY THE FAMOUS G

FUNK'S

HYBRID

The well-known Lindsey lineup of hybrid sorghums is now carrying this new Lindsey/Funk's G-Hybrid trademark. It shows the close affiliation of these two great families of hybrids.

The performance of Funk's G-Hybrid corn and Lindsey/Funk's G-Hybrid sorghums has created a remarkable demand. Give your next year's seed requirements some thought right now. That way you'll make sure you receive all you want of the hybrids you need for spring planting.

Garden Spot YFA Elect Officers At Banquet

The newly-elected officers of the Garden Spot Young Farmer Association, chosen at the Third Annual Awards Banquet, were Charles Martin, Parkesburg R2, president; Robert Martin, East Earl R1, vice president; Clyde Martin, East Earl R1, secretary; Eugene Eberly, New Holland R2, treasurer; and Monroe Good, East Earl, member at large. These new officers will guide the Young Farmer Program for the coming year.

The past president, Roy Mentzer, New Holland R2, served as toastmaster for the Awards Banquet of the Garden Spot Young Farmer Association, held Friday, February 26, at the Garden Spot High School cafeteria.

The annual banquet is an awards program sponsored by A B C Groff, local farm implement dealer, and Earl Sauder, local feed dealer in New Holland. The corn growing contest winners received trophies, plaques, vise-grip wrenches, seed corn, and certificates for their year's efforts in achieving efficient corn production.

Kenneth Skiles, Narvon R2, was the top winner of the Corn Growing Contest with a yield of 144 bushels of 15 percent moisture shelled corn per acre from his farm plot. Second place went to Jonas Martin, Gap R1, with a yield of 136 bushels of shelled corn per acre.

Lancaster Farming, Saturday, March 6, 1965—17

A trophy was presented to Marvin Zimmerman, East Earl R1, for the third-place entry in the county plowing contest in 1964. Martin Good, East Earl R1, received the tractor driving trophy for placing first in the Safe Tractor Driving Contest. Kenneth Skiles, Narvon R2, received the trophy for being the high Dandy Herd Improvement Association member during 1964. A plaque was presented to Melvin Brendle, East Earl R1, for having attended the most meetings in the educational series held during the past year.

Certificates of appreciation were presented to Dr. Warren Preisol, local veterinarian; John Brelsford, Agricultural Engineer at New Holland Machine Company; B. Wilmer Martin, local milking machine dealer; Clyde Martin, local farmer; Monroe Good, local farmer; James Weaver, local attorney.

Get the BIG silo unloader value!

VanDale Delivers more silage faster!

Double auger system digs the silage faster and more evenly under all conditions whether silage is frozen, wet, or dry.

Exclusive, adjustable drive hub gives more positive traction, keeps the machine operating evenly, and requires less power.

DELIVERS BETTER SILAGE TOO!

The double augers, operating in conjunction with the patented V-paddle impellers, dig the silage, mixes it thoroughly, and then throws it down the chute. Your cows and cattle get good, palatable silage... not a powdered mash as so often happens with unloaders using blowers.

THE TOP FIVE YOUNG FARMER WINNERS IN THE GARDEN SPOT CHAPTER CORN CONTEST received their awards at the annual banquet at Garden Spot High School. Left to right: Abram Zeiset (5); John E. Campbell (4); Roy Mentzer (3); Jonas Martin (2) and Kenneth Skiles (1). Skiles also won the High DHIA Member Award, and ranked 26th in the county with a herd average of 15,400 pounds of milk, and 593 of butterfat. L. F. Photo.

FARM WOMEN #11 MEETS

Farm Women Society Group No. 11 met recently at the home of Mrs. Heiman Shirk, Quarryville.

It was reported that 161 cancer patients had been made Anna Armstrong reported that she, Mrs. Helen Wagner, Mrs. Wm. Bucher, and Mrs. Esther Musser toured the Lancaster County Home and Hospital recently under the guidance of Rev. Wondery, superintendent. The Group was entertained by a quartet from the chorus of "Garden Spot" with the songs "Raisin Pie" and "Paradise."

Society 11 will sew at the Ressel home March 8th, and at the General Hospital, March 4th. The next meeting will be held in the Quarryville Methodist Church, at which time Society No. 23 will be entertained.

Transfer Milk Efficiently From Cow to Bulk Cooler

The "Sputnik" MILK-PORTER is the cleanest, most efficient method for transferring milk from cow to bulk cooler.

- Manufactured from heavy gauge stainless steel.
- Lid seals tightly to keep milk germ free.
- Passes through openings 29" and over.
- Moves quiet and easily on rubber-tired, ball bearing wheels.
- Does away with long, expensive pipe lines, milk pumps and releaser.
- Two sizes.
- Low-cost sanitizing.

For The Farm Wife

(Continued from Page 14)
6 slices process American cheese

Make waffles according to your favorite recipe. For topping, combine all ingredients, except cheese. Spread mixture on each waffle section. Top each with a cheese slice. Broil 1 or 2 minutes or until cheese is melted. Serve immediately. Makes 6 servings.

TUNA-FRUIT SALAD

- 2 cans (7-oz.) tuna, drained
- 1 orange, peeled, cut into bite-size pieces
- 1 unpeeled apple, diced
- 1 cup seedless grapes, cut in halves
- 1/2 cup coarsely broken walnuts
- 1 cup mayonnaise
- 1 teaspoon grated lemon peel
- 2 tablespoons fresh lemon juice
- Salad greens
- Lemon quarters
- Paprika

Flake drained tuna into medium size pieces. Combine tuna, orange, apple, grapes and walnuts. Blend mayonnaise, lemon peel and lemon juice. Stir half of the blended mayonnaise through the salad ingredients lightly. To serve, spoon salad onto crisp salad greens; garnish with lemon quarters and sprinkle with paprika. Serve remaining salad dressing.

Why Crops Need Limestone

Two important ingredients needed by crops are calcium and magnesium. Both are regularly lost through the soil by the following ways:

- (1) By leaching, which is a slow leaking away, a normal process where there is rainfall.
- (2) By crop removals. Legumes, such as hay and other greens, are taken off the fields, instead of plowed under.
- (3) By general use of the soil.

Because of this loss, the soil becomes what is known as high in acid. Putting on limestone may supply calcium and magnesium and correct the soil acidity at the same time.

It has been shown in experiments by agricultural colleges and experiment stations that for every dollar spent for limestone, from \$3 to \$15 are returned to the farmer through increased yields.

The U.S. Government is so thoroughly convinced of the worth of applying limestone that about one-half of the cost is granted free when application is made for it. This is to encourage farmers to be certain to use limestone.

It does pay to use limestone!
